

Rectangle Editor

Overview

Because there will be a modal dialog box on the final coding exam you need to make sure you know how to use one. If you add a modal dialog box to your Tile Editor you can skip this assignment. It's very simple but if you can do this assignment then you should have no problems with the modal dialog on the final exam.

The program simply draws a rectangle into the main Form and then allows the user to edit the X, Y, Width and Height of the rendered rectangle using a modal dialog with OK, Cancel and Apply buttons.

When the dialog is first shown it must display the current value of the rectangle. When the values are changed in the dialog and then the OK button is clicked the dialog should close and update the rendered rectangle. If the cancel button is clicked the dialog should close and do nothing. If the Apply button is clicked then the rendered rectangle should update and the dialog should stay open.

Read the *Tutorial_ModalDialogs.pdf* if you need help.
