WP2 Class #6 Vocabulary

1. **FormBorderStyle.FixedDialog** - This enumeration is used to produce a thick, fixed dialog-style border on a Form.

2. **MaximizeBox** – This property gets or sets a value indicating whether the Maximize button is displayed in the caption bar of the form.

3. **MinimizeBox** – This property gets or sets a value indicating whether the Minimize button is displayed in the caption bar of the form.

4. **HelpButton** – This property gets or sets a value indicating whether a Help button should be displayed in the caption box of the form.

5. **DialogResult** – This enumeration specifies identifiers to indicate the return value of a dialog box.

6. **AcceptButton** - This property enables you to designate a default action to occur when the user presses the ENTER key in your application.

7. **CancelButton** – This property gets or sets the button control that is clicked when the user presses the ESC key.

8. **ShowDialog** - Shows the form as a modal dialog box.

9. **Data Exchange** – The act of passing information in and out of a dialog box. In C# this should be accomplished through the use of properties.

10. **Controls** – This property gets the collection of controls contained within the control. When several controls are added to a Form, each of the controls is a member of the Control::ControlCollection assigned to the Controls property of the form.
